

Bug reports

Note: All acceptance criteria for the below bugs should be the same as the descriptions of the expected results.

Bug 1

Summary

- The person's profile is still exposed when click the 'Logout' button.

Environment

- Test environment

Source URL

- <https://buggy.justtestit.org/>

Steps to reproduce

- Login with username = user9, password = Hello123.
- Click the 'Login button -> Click the 'Profile' button (User's details are displayed on the current page)
- Then click the 'Logout' button, no changes for current page

Expected results

- Users can log out successfully
- When clicking the 'Logout' button, the current profile page should be cleared, display an empty page or navigate to the landing page automatically

Actual results

- Even clicked the 'Logout' button, the user's details are still visible and displayed:

Bug 2

Summary

- Should display the password format rules when the user fills the password field. Also, the colour of the text box will mislead users.

Environment

- Test environment

Source URL

- <https://buggy.justtestit.org/register>

Steps to reproduce

- Type below password in password field:
 - Abc12. – password is too short
 - Abcd1234 – no special character
 - abc1234... - no uppercase letter
 - ABC1234... - no lowercase letter

Password

Confirm Password

Expected results

1. when the user is typing a password, a prompt message should be displayed at the bottom of the 'Password' text box: "Set the password with a minimum of eight characters (at least include 1 Uppercase + 1 lowercase + 1 special character)".
2. When the user types a wrong format password, the text field should still be displayed in red colour.

Actual results

1. No prompt message to remind the user of the rule of password format.
2. Also, when the user types a wrong format password, the text field displays green colour, which will mislead users into thinking that the correct pattern password has been entered:

InvalidParameter: 1 validation error(s) found. - minimum field size of 6, SignUpInput.Password.

Bug 4

Summary

- There is no forgotten password functionality. Users can change their password in Profile, but they should log in first. Users must re-register another new account if they cannot remember their current password.

Environment

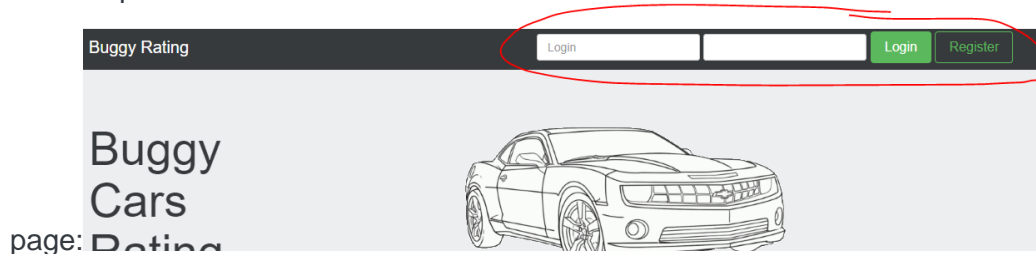

- Test environment

Source URL

- <https://buggy.justtestit.org/register>

Steps to reproduce

- At the top of home

Expected results

- Should be included functionality to help the user reset their password.

Actual results

- No find password functionality at the moment.

Bug 5

Summary

- An undefined error is displayed in the user profile.

Environment

- Test environment

Source URL

- <https://buggy.justtestit.org/register>

Steps to reproduce

- Login with valid username and password
- Got to profile
- Type additional info fields as below, most of fields were typed invalid data

Additional Info

Gender

Male

Age

fggf

Address

ilolij

Phone

5675

Hobby

Other

-
- Then click 'Save' button

Expected results

1. When the user enters invalid data for those fields, for example, typed text as Age should display an error notification to remind the user to use the correct data.
2. If entered any data with the wrong format value, it should display a clear error message, like 'Invalid age number.'

Actual results

1. No error notification is displayed even user entered invalid data for those fields.
2. When a wrong format value is entered, an unclear error message is displayed as 'Unknow error':
